

Bohdan against "tails"

Problem Author: Pavlo Tsitseï
Prepared by: Pavlo Tsitseï, Feysa Bohdan
Editorial by: Pavlo Tsitseï

The solution is to simulate the process described in the statement. That is, considering the element i , it is necessary to add to the answer $\max(\lfloor \frac{x}{2^k} \rfloor, 1)$ where k is the number of elements $j < i$ such that $a_i = a_j$.
